CYBER SENTRY

As a cyber security guest faculty at the Karnataka State Police Academy and Karnataka Judicial Academy, since 2011, Ananth Prabhu Gurpur has shared with his audiences all that he has learned about cyber crimes against women. "I was terrified thinking what if crimes like these happen to someone in my family or with my friends. So I started the #cybersafegirl daily posts, using info-toons to highlight cyber crimes, the modus operandi of the criminals and how one could stay safe," says Prabhu.

When the number of identified common cyber crimes—based on calls for help from women—reached 15 by 2018, Prabhu compiled them into a book by the same name. As new crimes came to light, he added another 10 and launched the book's second edition this year. "I would like to believe that the info-toons have left a deep impact on readers, and that they now think before clicking on anything and everything they come across online," says Prabhu.

Cyber awareness is the key, says Prabhu, who has trained more than 100,000 students in India on cyber security and the best practices to stay safe online. An online course on cyber security and a downloadable version of his book are available on his website (www.cybersafegirl.com). Prabhu cautions that smartphones, laptops and digital devices have turned into a mine of information about people's lives.

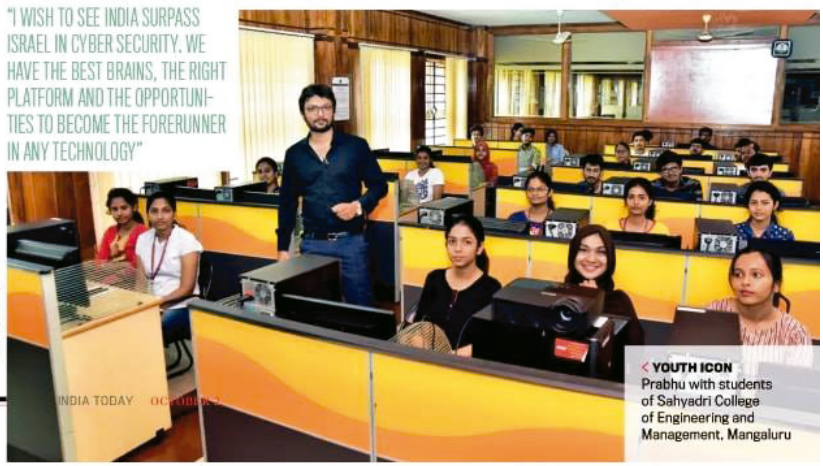

"There is also something called deep fakes. With the help of high-end filters, photo editors, printers, scanners, apps and other software, anyone can pick your video and use your input to manipulate and blackmail you. Such advanced picture morphing can have dangerous consequences," explains Prabhu, who has a PhD in computer engineering from the Visvesvaraya Technological University, Belgaum.

Prabhu wants cyber security introduced in school curriculums so that students are made more aware of the dangers lurking online. He cautions government agencies on the need to upgrade their cyber security and would also like to see India's cyber laws updated periodically to meet the growing challenges.

Prabhu, who teaches computer science and engineering at Mangaluru's Sahyadri College of Engineering and Management, says e-books and workshops are the first steps towards ensuring women's safety in cyberspace. "I also do not want people to lose money, reputation or intellectual property to cyber criminals." Asked what keeps him motivated, he smiles: "Nothing is more satisfying than participants at workshops walking up and saying a thank you!" ■

TIPS FOR PARENTS

A shelf that provides books for the needy

A group of like-minded people has launched 'Good Book Shelf' in Mangaluru to provide books to the needy studying from KG to PG. Dr A student can now just go and pick the books of his/her academic interest.

Ananth Prabhu G, advocate, Vikas Group of Institutions, under the banner 'We Are United', told BM: "Many students who are keen on studying may not have access to the right books. Academic books have become really expensive. We get a lot of requests to help. There are many more who are not comfortable seeking help. With the help of donors and sponsors, the first book shelf was launched at Luna Mart, a super market in Bejai, Mangaluru on Saturday. "The book shelf has 300 books and eight books have already been taken by the needy students," he said.

Ananth Prabhu added, "Anyone in need of a book can borrow the same. There is no need to return the book. The donors have given books that are in good condition. Also, in case, a student does not find the required book, there is no reason to feel disappointed. Every shelf will have a telephone number of a volunteer. The student needs to mention the title of the book and send an SMS to the volunteer. In case the student does not have a mobile phone, help can be taken from the store staff. Once the demand is placed, volunteers will first try to source it from their collection. In case, they do not find the book, and if the student in need hails from an economically backward family, donors will purchase the required book and hand over it at the student's home, to ensure that there is no misuse of the project." Mangaluru is likely to get many more such book shelves soon.

"We Are United' is a group of 400 volunteers launched about two years ago. Last month, the team conducted a 'blanket drive,'" he said.

Infotoons spread a good word on cyber safe girls

Mangaluru: Ananth Prabhu, cyber security expert who is the adviser for Vikas Group of Institutions, and Vivek Shetty, an entrepreneur and social activist from Mangaluru, have brought out the e-booklet, 'Cyber Safe Girl — Beti Ki Bachao, Cyber Crime Se', which comprises 15 infotoons to ensure online safety of girls.

It focuses on how girls can fall prey at mobile recharge shops, debit card cloning, SMS spoofing, call spoofing, ransomware, cyberstalking, picture morphing, profile hacking, online games, job call letter, dating websites, camera hacking and social trolling.

Ananth Prabhu said while the e-book is available on www.cybersafegirl.com, the hard copy was recently distributed to girls at Boshni Nilaya School of Social Work in the presence of Mangaluru City DCP (Crime) Uma Prashanth.

At the workshop, students will attend talks by ADGP Sanjay Sahay as well as Ananth Prabhu, following which each girl will visit five houses and enlighten girls there on how to be cyber safe. "We're building a network of cybersafegirls. Since the infotoons are currently in black & white, at the workshop, students will be given sketch pens and asked to colour them. The best posters will be selected and a colour edition of the e-book will be released by March-end," Prabhu said.

The work has been recognised by the Centre for Development of Advanced Computing and the Information Security Education and Awareness of the government and will be distributed among CBSE schools. About 10,000 copies are being printed and distributed free to girls in Dakshina Kannada in the first phase and very soon they will reach other districts too.

About 75,000 downloads of the e-book have taken place.

The work has been supported by Hanumantharaya DCP (Law & Order) Mangaluru City and senior IPS officials including Sanjay Sahay, Murugan, Arun Chakravarthy, Roopa D, Vedamurthi CB and other officers including Uma Prashanth, Reena Suvarna, Yogesh Kumar and Sowmya Teja. Others who helped in the work include Prashanth Jhala (cyberlaw consultant and cybercrime investigator), Anudeep Karkera (artist), Naga Basava (SEO expert) and Waseem Shan (web developer).

CyberSafe 2020 calendars distributed

TIMES NEWS NETWORK

Mangaluru: Former IPS officer K Annamalai distributed CyberSafe2020 calendars in Mangaluru recently.

ONLINE SECURITY

This is an initiative by Ananth Prabhu G, professor, computer engineering, at Sahyadri College of Engineering & Management and cyber security trainer for the Karnataka Judicial Academy and Karnataka Police Academy, under the guidance of ADGP Sanjay Sahay to create awareness about cyber safety. It is also to ensure citizens know about the various cyber crimes and tips to 'browse the internet responsibly. The team distributed 1,000 calendars to various households in and around Mangaluru on the occasion.

The calendars were provided by ISEA-Information Security Education and Awareness by the government of India, supported by CyberSafeGirl Project.

The calendar comprises 12 important tips, one tip for every month, to ensure the internet users take the necessary precautions to browse safely.

Drones to drop seeds in Western Ghats

MANGALURU: Vikas College, Mangaluru, has decided to use drones to drop seeds to increase green cover in Western Ghats.

Former minister and Chairman of Vikas Education Trust Krishna J Palemar and his team aims to plant 1 lakh saplings, especially rare ones in Western Ghats to ensure that flora and fauna remain undisturbed. He was inspired by the BioCarbon Engineering, a UK-based startup, in this regard.

The tree-planting drive, which will be carried out over the next three months, was flagged off on Saturday on Vikas College campus. The custom-made drones were built by start-up Dreamers Pvt Ltd at Sahyadri College Incubation Centre.

Speaking on the occasion, MLA C T Ravi said, "Human beings cannot live destroying the nature. The environment issues need to be addressed."

About the project, Palemar said the team will first conduct a 3D aerial survey of forest land. Drones will be flown over potential planting zone taking photographs of the area to create a 3D map. Based on the map, a plan will be chalked out to plant the saplings, he added.

The number of drones will vary depending up on the size of the seeding. Once all that terrain data is analysed, then a seeding pattern, which suits the terrain best, will be generated. Drones are then loaded with seed pods. Drones, which are equipped with guidance and control software, will carry pressurised canisters of seed pods with germinated seeds immersed in a nutrient-rich gel.

Using hover-and-plant method, drones will follow the planting patterns, firing the biodegradable seed pods down to the ground. The pods break open upon impact, allowing the germinated seed to take root, he added. He said planting about 10 pods per minute will equate to around 36,000 trees per day for each team.

The next set of drones to be designed will have solar-powered batteries and a capacity to fire more seed pods.

'Students should decide their future, not their parents'

MANIPAL, DHNS

As many as 1,150 students from six pre-university colleges took part in the career guidance programme organised by Academy of General Education (AGE), in association with Deccan Herald and Prajavani, at Dr T M A Pai auditorium in Kasturba Medical College (KMC) on Friday.

The programme was conducted in two sessions for students from MGM PU college in Udupi, Sri Bhavanendra PU College in Karkala, Sri Mahaveera PU College in Moodbidri, Bhandarkar's PU College in Kundapura, Vijaya PU College in Malki and Madhavakripa School in Manipal.

Cyber crime expert Ananth Prabhu G, with the help of a power point presentation, initially focussed on breaking self-imposed barriers to become an achiever. Prabhu, who has conducted more than 1,000 workshops, said positive outlook, patience and passion are important to be successful in life.

He also emphasised on how specialskills are needed in the era of specialisation. Prabhu ended his talk with a strong message against attempting suicide.

"If you have missed some balls you need not worry. As there will be more balls coming your way," he stressed using cricket as an example to communicate the message.

He also highlighted on conventional courses, offbeat courses offered by different institutes to students completing second PUC.

Aditya, a student of second PUC (Commerce), Sri Bhavanendra PU College said, "This is the best than the previous programme. The two examples cited during the talk on what sets apart an ordinary painter and Spanish Painter Pablo Picasso and Arjun's concentration had a huge impact on my mind."

Lakshmi Prabhu of the same college also found the talk very useful.

Bhramara from Bhandarkar's College said she was surprised about the variety of courses available for students from Arts discipline. "I realised that even students from Arts discipline can become achievers."

Earlier during the day, AGE President and MAHE Pro Chancellor Prof H S Ballal, inaugurating the programme, said the students have abundant opportunities today. "The students should decide their future and not their parents," he stressed.

The Printers (Mysore) Private Limited Assistant Manager (Advertisement) Vincent Prashanth D'Souza, was also present. Well known RJ Avinash Kamath compered the programme.

Academy of General Education (AGE) President and MAHE Pro Chancellor Prof H S Ballal inaugurates career guidance programme organised at Dr T M A Pai auditorium in Kasturba Medical College in Manipal on Friday. Resource person Ananth Prabhu G (second from right) is also seen.

Cyber Safe Karnataka project kicks off

Textbooks need to be revised periodically because there is disruption in the world! Technologies change, policies change and to keep up with this fast-paced world, it is necessary for regular revision of books. But, the revision must focus on key elements for holistic development of students and touch upon areas like cyber security, investing money, thinking critically, identifying the purpose of life, physical and mental survival skills, handling relationships and personality development. It is unfortunate to see that the current Gen-Z is unable to handle adversities of life and many commit/attempt suicide. Therefore, for a successful life ahead, there is a dire need to make students street-smart, alongside being 'school smart'.

— Dr Ananth Prabhu, Mangaluru-based author, software engineer, motivational speaker and cyber security expert

Notebooks will create awareness on cyber safety introduced for students

DeepthiSasi@timesgroup.com

Mangaluru: With a rise in cybercrime cases and cyber safety still not being taught in several schools and colleges in the state, cyber security expert Ananth Prabhu G has teed up with School Book Company, Udupi, to print notebooks with pages dedicated to awareness on cyber safety.

Ananth Prabhu said, "I was wondering what could be done to ensure that children become the internet responsibly and understand the perils of the digital world. I tied up with the School Book Company, Udupi, and requested them to come out with the Cyber Safe India series. The books are not charged anything extra, but every book will have three infoboxes from the CyberSafe girl with book, cyber safety tips for mobile and internet users and the important cyber laws of India. The inner cover (front) box are infotoon and the back third has two infoboxes. One page is exclusively dedicated to mobile and internet safety tips, and at the back are the important cyber laws of India."

PSB A CAUSE: Notebooks with content that create awareness on cyber safety are being printed for students

Prabhu said that this was an attempt made to ensure that without being a burden on the pockets of students, the much-needed information was incorporated. "I am willing to share details on cyber safety with any publishers across the country wanting to incorporate this in their notebooks. The CyberSafe girl e-book is available online for free, and already five crore downloads have taken place. The fifth version has references to 30 different cyber crimes, and the sixth version to be launched soon will have 45 different crimes, indicating that about 15 crimes have increased in a year, because of AI. These books have been published in Kannada, Konkani and Gujarati. Soon, Kannada infoboxes will be introduced in the ruled and unruled books," he said.

The next version of the notebooks will have QR code-based videos. School Book Company, Udupi, has a tie-up with many schools in Udupi, and the books are printed in eight different colours, so that students have access to the whole set. So far 1 lakh books have been printed and distributed in seven schools, said Prabhu, requesting the state government to ensure mandatory printing of this message in all notebooks distributed to the students of government schools.

Security expert cautions against AI-driven cyberthreats in 2026

Hyper-Realistic Deepfakes To Rise

#DontGetScammed

Bhi 1121 to your loved ones and protect them from scams. Call 89 95 124 124

DeepMLSad@timesofindia.com

Mangaluru: Artificial intelligence-driven cybersecurity threats are expected to intensify further in the coming year, with 2026 already witnessing a sharp rise in sophisticated cyberattacks, according to cybersecurity expert Ananth Prabhu G. He said that the expanding digital footprint of users has dramatically widened attack surfaces.

"In 2026, we saw a surge in internet and smartphone users. With [it] becoming ubiquitous, almost everyone now carries a smartphone, which significantly increased attack vectors. Cybercriminals also expected incapitalise on this in the coming year," he said.

For individuals, the biggest concern will be AI-amplified social engineering attacks. "Earlier, phishing emails were easy to spot because of spelling and grammatical errors. Now, cybercriminals are using large language models to draft emails that look more polished than legitimate ones. In recent months, we analysed several such emails and found hardly any errors," Prabhu said. AI is also expected to play a major role in identity theft and account takeovers. Research indicates that users reuse the same password across an average of 2.7 accounts. "Leaked databases are readily available on the dark web. AI can identify these datasets, map email IDs to multiple platforms, and systematically try the same or similar passwords, automating the entire hacking process, from data procurement to account takeover," he said.

Therefore, he advised users to use different passwords combined with multi-factor authentication be explained. Another emerging threat is malicious prompt injection. Prabhu said that while AI systems are designed to block harmful queries, attackers can manipulate prompts to bypass safeguards and extract sensitive information.

"This could lead to unintended disclosures and potentially harmful actions," he cautioned.

The rapid adoption of internet of things (IoT) devices has further expanded vulnerabilities. He cited an instance where smart home devices, such as robotic vacuum cleaners, were found transmitting detailed 3D maps of homes to overseas servers. "As homes get smarter, spying on users, breaching home networks, and compromising connected devices becomes easier," he said.

AI-driven fraud campaigns are also expected to surge. With vast amounts of personal data available on social media, cybercriminals can craft highly targeted and convincing scams. "Ultra-specific, AI-tailored fraud campaigns could include single target civilians," Prabhu said. For corporations, the threat landscape includes AI-driven ransomware negotiations, automated extortion through chatbots, supply chain attacks, particularly in the e-commerce sectors, and AI use in zero-day exploits. Creation, abuse and hyper-realistic deepfakes are also likely to escalate.

At the national level, AI-generated disinformation campaigns are expected to become more sophisticated, posing serious challenges to governance, public trust, and security in the year ahead.

Prabhu pointed out that cyber warfare has now become an integral part of global defence strategies. "Alongside conventional military defence, every nation now has to have robust Cybersecurity units to restrict themselves to merely reactions alone. Attacks on other countries for revenge prevention are also likely to increase," he noted.

DR ANANTH PRABHU

Karnataka's cybersecurity pioneer

In an exclusive interview with South Canara Chronicle, Dr Ananth Prabhu discusses the growing cyber threats, common security risks associated with digital transactions, available modes for filing complaints related to cybercrimes and threats, and essential digital hygiene practices that individuals should adopt.

Maryam Aftab Kola

Technology

Some people work tirelessly to make the world a safer and better place for all. Among these few is Dr Ananth Prabhu G, a distinguished figure in the fields of cybersecurity and cyber law. He is the chief architect of the Cyber Safe Karnataka Project, an initiative with the ambitious goal of making Karnataka the first cyber-safe state in India.

Prabhu's dedication to education is exemplified by his role as a professor and principal investigator at Sahyadri College of Engineering and Management in Mangaluru, where he leads the Cyber Security and Digital Forensics Center of Excellence. He has conducted over 2,500 workshops, sharing his expertise with students, community and social activists, and police personnel, among others. His contributions have earned him accolades, such as the District Rajyotsava Award and recognition as one of India Today's 50 Unsung Heroes of India.

Given India's vast digital footprint and growing economy, what are the most pressing cyber threats currently facing the country? How can businesses and individuals prepare for and address these threats effectively?

The digitalization of India in the recent past along with the booming economy of the country has attracted many hackers. These include ransomware attacks, phishing scams, data breaches, and supply chain attacks that are the most relevant threats the country faces at the moment. Such threats can bring about financial losses, operation disruption, and adverse effects on the companies' reputation. These risks can be managed by regularly updating software and systems with the latest security patches, following strong password policies, training employees, and using precautionary measures like firewalls, intrusion detection systems, and encryption. Also, businesses should have a contingency plan to arrest any cyber event that occurs so that the impact will not affect a larger population.

With the passage of the Digital Personal Data Protection (DPDP) Act, 2023, do you believe this legislation adequately addresses the current cybersecurity and data protection concerns?

The DPDP Act 2023 is a significant enabler to combat India's cybersecurity and data protection problem. While providing personal data legal regulation of the information turnover, the Act offers people certain control over their personal information and places certain duties on the companies which process personal data. However, it needs to be seen how effective it will be depending on its implementation and enforcement. The compliance designed to meet the provisions of the Act can be quite costly and time-consuming, especially for small businesses. The DPDP Act aligns with many global data protection standards, particularly the General Data Protection Regulation (GDPR).

Dr Prabhu's six key measures to ensure digital security

- Always create complex passwords for all the online profiles you create and never share the credentials. Do not use the same password for more than one website and also, don't reuse passwords.
- Use two-factor authentication or 2FA for an extra layer of protection.
- Refrain from opening any link or downloading any attachment from any unrecognised source.
- Be alert and observe any strange transaction in the account and inform the right agency.
- Avoid using the free WiFi. Do not transact on insecure networks as it is risky for your personal information.
- One can also use Virtual Private Network (VPN) that helps to encrypt your Internet traffic and maintain privacy.

On a mission to upgrade 100 government schools with AI and Cyber Security laboratories to equip students with the new age skills.

2 TIMES

Alumni come to rescue century-old govt school, to turn it into Delhi model school

Mangaluru: The alumni and well-wishers of a government-model higher primary school in Chelyara, Sullia, have come to the rescue of the school, which was on the verge of closure due to poor admissions.

The old students realised that the school, which had been offering education for the past century, was about to close due to having less students. Alumni group led by Sudhakar B Shetty and 34 others, who wrote a letter to the state government, were able to stop the closure of the school. They have now started a school trust, and have come up with several unique academic plans, to increase admissions. The trust wants to convert the school into a Delhi model school, in another year.

Giving out details, Yathin S Shetty, an entrepreneur and son of Sudhakar Shetty, said that his grandfather Puttu Shetty was a teacher, and his father studied in the school. The school which had good admissions, saw a decline, as private English medium schools mushroomed nearby. Currently, the school has only 26 students admitted from class 1 to VII. The government citing poor admissions, had decided to close it, and transfer government teachers and students to other nearby schools. "We are now able to stop it, and a trust named Sharada Vidya Seva Trust has come up to revive the school. The trust members outside of old students, and like-minded persons." The school currently has nine classrooms, with four government staff. They have received guest teachers for LKG and UKG classes, which commence from May 15.

On how the school will be converted into a model school, cybersecurity expert Ananth Prabhu G said they have made several plans. In the first year, the school will have LKG and UKG classes. In the coming year, the school will also have an English medium curriculum. "We have more than 20 queries for LKG and UKG admissions. Some parents have assured that they will send their wards from the next academic year, after hearing about the school's performance. So far there is a positive response," said Yathin, adding that many have come forward to donate furniture and gadgets. Unpaid volunteers have also joined the school. The trust has decided to provide free education for all.

Prabhu further said that there are plans to have AR/VR enabled smart classrooms, STEM Lab, introduction of LKG and UKG classes, learning management system, Skill-alert based attendance system, secure campus with surveillance, use of solar power, organic kitchen garden, regular counselling and coaching sessions for students and parents, and free school bus facility with GPS among others.
